SAP XI and Your Integration Architecture of the Future

☉▶ Everyone knows that the smooth exchange of information and accelerated business processes both lead to long-term cost savings. XI is a powerful integration environment created by SAP that enables SAP systems to communicate with those of other software producers. SAP's vision is to achieve the complete integration of every single corporate process and business partner you may wish to include. The question is, how do you go about implementing XI quickly and effectively? How can XI be employed cost-effectively? How does EDI work via XI? And finally, how can XI be integrated into your own B2B strategy?

XI and your B2B strategy.

Powerful EDI.

Your integration scenario.

As well as being certified SAP XI consultants, our experts also have ample experience in the field of B2B integration. They will analyse your particular situation with you and will develop a concrete scenario for the integration of XI within the scope of your future strategy.

{ Part 1 of the workshop: information }

- What NetWeaver, SAP XI and ESA/SOA can achieve in your company's case.
- The holistic, cross-system approach adopted by crossgate.
- Best practices.

{ Part 2 of the workshop: analysis and advice }

- The best way of integrating XI into your own B2B strategy.
- Developing a possible road map for integrating XI in your company (implementation, Go Live support, application management).
- Analysis of the benefits and risks inherent in the new strategy developed for your firm.
